

Insurance on Demand

Innovative technology that takes the guesswork out of understanding your health system's insurance agreements and enables efficient and accurate communication of insurance coverage with patients.

CENTRALIZE YOUR HEALTH SYSTEM'S INSURANCE COVERAGE DETAILS

Insurance on Demand (iOD), a revolutionary insurance decision support tool, simplifies tracking a health system's ever-changing insurance contracts. iOD provides employees with quick and easy access to the organization's current coverage details, including (but not limited to):

- Each plan's network status by facility
- Lead time required by each Payor to obtain pre-certification, for each type of treatment
- Plan-specific scripts and workflows to guide the staff when scheduling patients
- Up-to-date payor and plan alerts, visible in iOD or through automated email push notifications
- Provider credentialing status by payor
- Quick access to plans, based on payor and payor type (i.e., Medicare, Medicaid, Commercial)
- Insurance-specific document and announcement repositories
- Payor ID card gallery

ENSURE EMPLOYEE EFFICIENCY & PATIENT SATISFACTION

Insurance on Demand empowers healthcare systems to:

- Eliminate the speculation, variability and reliance on employee's memory when assessing the network status of a patient's insurance plan
- Alert patients at the point of scheduling, to their current network status and financial obligations
- Schedule patients with enough lead time to obtain the necessary pre-certifications
- Minimize the financial and operational risks of unknowingly treating out-of-network patients
- Reduce employee dependence on administrative teams for standard insurance questions
- Eliminate manual, organization-wide alerts with each Payor change or notification

FOSTER EMPLOYEE ENGAGEMENT

"The data is in one place. It's accurate, it's timely, and it's super easy to use!"

"I can't tell you how much I appreciate a tool that we all could use, understand together as an organization, and explain clearly in human terms to patients and their supporting caregivers as well as each other. It is pretty cool!"

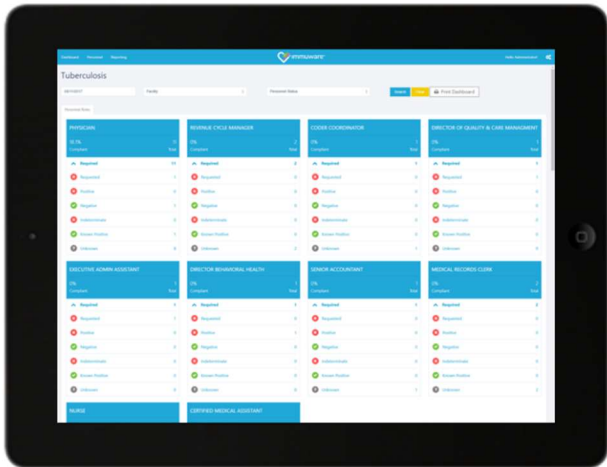

"It is the tool we have been waiting for. It is easy to toggle between the various options such as performing a search, reviewing the caveats, the document repository, and the announcements. It is very intuitive on how you would search a patient's in-network/out-of-network insurance."

ABOUT CARMINATI CONSULTING

Carminati Consulting designs, builds, and delivers leading edge technology and business process redesign consulting services that solve real-world business challenges. From concept through execution, we help clients realize competitive advantages, create organizational efficiencies, and achieve strategic business objectives. Carminati Consulting has been serving the technology needs of leading organizations since 2010.
