Delivering Better Outcomes With Data Analytics

While collaborating with a specialized team of providers at a large Chicago health institution, Carminati Consulting recognized an opportunity to simplify the collection and tracking of Hepatitis C diagnostic data, which was historically maintained in multiple, non-integrated systems. The client welcomed Carminati's assistance, which:

Helped our Client to

- Electronically record, store, secure and report reliable, accurate and publishable Hepatitis C data
- Develop actionable, meaningful and comprehensive insights via data analytics
- Effect seamless integration between unrelated systems, to expand data sets for analytical purposes
- Simplify day to day workflows
- Build and implement a secure, easy to maintain and accessible central data repository

Empowered our Client to

- Simplify how patient intervention effectiveness is evaluated
- Eliminate the need for staff's manual data entry and time-consuming reconciliations
- Quickly access statistics that are critical to demonstrating the program's value
- Streamline the compilation of regulatory reporting data
- Expedite the identification of trends, to better understand patient health conditions over time

Identify new

- Hepatitis C population patterns
- Target populations for awareness campaigns
- Opportunities for improvement

Delivered Value

Our client has already realized increased efficiencies, cost savings and *improved quality of care*. Our partnership has not only helped our client improve patient outcomes, but will continue to help the organization demonstrate the value of their specialized care going forward, thereby enhancing their ability to secure additional funding and to *successfully care for future patients*.
